

NEW EQUIPMENT LEADS WAY FOR FABRICATIONS GROWTH

Please attribute any quotes to Kevin Shepherd, General Manager, R H Hall Fabrications

R H Hall Fabrications have recently made further investment in their range of factory equipment, to increase capabilities and allow further growth.

2017 has seen the Fabrications Division gain a number of new customers and contracts, leading to an increase in orders and output required. To ensure demands are met and allow for further improvements to production, investment has been made in additional quality machinery to enhance the existing set up.

General Manager Kevin Shepherd said “This new equipment gives us the opportunity to move our overall capacity forward by increasing our stainless steel cutting ability, improving quality with an additional high spec laser cutter and also streamline our production by removing old equipment.”

Continuing to work with market leading manufacturer Amada, the new equipment includes a Press Brake – which will double bending capacities and remove any chance of bottlenecks in the production process. There are now 2 identical machines in place and CNC programmes can easily be shared between the 2 by USB. Also added is a new 2kW Laser Cutter, ideal for cutting stainless steel up to 6mm thick. This will work alongside our existing Laser Cutter which will continue to be used for smaller production items.

Kevin explains that this investment is just part of the continued development and growth planned for the Fabrications Division – “Going forward we will continue with improvements to our work place organisation project and 5S programme, as well as reviewing our welding and grinding operations, to ensure we are continually improving our service and capabilities.”
